Defender for Identity

In today's digital world, compromised identities are a gateway to devastating cyberattacks. Leveraging the advanced capabilities of Microsoft Defender for Identity, Pathway delivers a cloud-based security service that **protects your organization's identities** against evolving cyber threats and integrates seamlessly with our Defender XDR for comprehensive threat detection and response across your hybrid environment.

What our service can do for your business

Proactive Threat Detection

- We utilize Defender for Identity to grant you **a clear view of your identity security** posture.
- Pathway identifies and addresses vulnerabilities before they're exploited, leveraging **real-time analytics and data intelligence** to detect suspicious activities and potential breaches.
- Our experts **uncover advanced threats** across the entire cyberattack lifecycle, safeguarding your organization

----

Enhanced Security Posture

- Pathway helps **reduce your attack surface** by identifying and mitigating security misconfigurations.
- We translate security assessments into **actionable recommendations** to improve your overall security posture.
- Pathway simplifies security operations by prioritizing relevant **security alerts** and providing user activity timelines for efficient threat investigation.

Suspicious Activity Detection across Attack Stages

- **Reconnaissance**: We uncover attempts to gather information about your users, groups, and resources.
- **Compromised Credentials**: Pathway detects brute force attacks, suspicious sign-ins, and compromised user accounts.
- **Lateral Movement**: We identify attempts to move laterally within the network to access valuable assets.
- **Domain Dominance**: Pathway detects attempts to gain control of domain controllers, preventing widespread compromise.

Benefits

Proactive Defence | **Improved Visibility** | **Reduced Attack Surface** | **Simplified Management**
